RSG + RVP SOLUTIONS

Company fit first. Scope clarity next.

Choose by workforce environment

Union-represented: start with RSG Solutions.
Non-union: start with RVP Solutions.
Mixed, changing or unsure: ask us to confirm the company for the worksite and scope.
Use the covered worksite, not the parent health system.

Bring five scope questions

1. Which worksite, areas and operating hours are covered?
2. Who owns each task, device or linen handoff today?
3. What frequencies, training and site instructions apply?
4. Which inspection and completion records are needed?
5. Who reviews exceptions and authorizes the handoff?

Match the service. Keep the boundaries.

EVS and floor care | Noncritical equipment | Linen | Construction and activation | Readiness
RSG and RVP are separate legal entities. Contracts, credentials, teams and past performance remain entity-specific. No high-level disinfection or sterilization is included in the noncritical equipment scope. The facility retains clinical release and occupancy authority.

Own every handoff. Prove every task.

Defined scope. Observed competency. Documented closeout.
A scope diagnostic is a focused conversation about company fit, scope gaps and the next planning step, not a compliance determination or an opening guarantee.
